***A Butterfly** Flaps its Wings...*

composition for String trio Arabic ud and Live Electronics

Copyright by: Shai Cohen 2004

Introduction

A Butterfly Flaps its Wings... designed to be performed as a string trio, Arabic ud and computer.

The computer realized the music live on stage, with performer foot-pedal triggering system and Max/Msp environment, and create a new musical gestures.

The computer voice is manipulate with the two dimensional Phase-driven oscillator that using a buffer~ as a Wavetable. The idea is similar to wave~, but with an additional axis. A given ms range of an audio file will be divided into n rows. The Y phase input will determine which row(s) will be used for playback.

The pictslider is a slider with the usual one-dimensional ranges of movement, for emulating hardware sliders. Its knob can also can move both horizontally and vertically, to represent a two-dimensional Controller such as a joystick to control the X phase of the 2d.wave~.

In addition the effect section including comb~ object implements a comb filter, in which a slightly delayed version of a signal is added to itself, causing phase cancellations and a spectrum that looks like a comb.

The vst~ object loads a real-time VST plug-in and uses its audio processing in MSP. Some plug-ins has their own Editing window, which is visible when you double-click on the object. Otherwise, double-clicking on the object displays a Default parameter editing window.

The user can view a Spectrogram or Sonogram Display and a A Signal Level Meter with Optional Ballistics. The buffer can be played forward and backward at any given time. The output can be recorded to the hard disk and Levels can be control including fade in and out.

Minimum/Recommended hardware and software configuration

Computer: Max/Msp software application and Microsoft Windows 2000/xp operating system.

Multi-channel Audio Interface:

A multi channel digital I/O interface for the computer allowing at least 2 discrete channel input and 4 discrete channel output.

4 matched speakers.

4 microphones:

2 condensers for the string trio and 2 dynamic for the Ud.

Mixing Board:

multi-channel mixing console.

- pictslider to control x,y phase

- trigger on-off recording using midi controller

Description of the algorithm

User interface

Multichannel sample buffer & Sample playback based on position within a buffer

send messages to a dac~ to start and stop the audio.

Two dimensional Phase-driven oscillator using a buffer~ as a wavetable. Similar to wave~, but with an additional axis. A given ms range of an audio file will be divided into n rows. Y phase input will determine which row(s) will be used for playback.

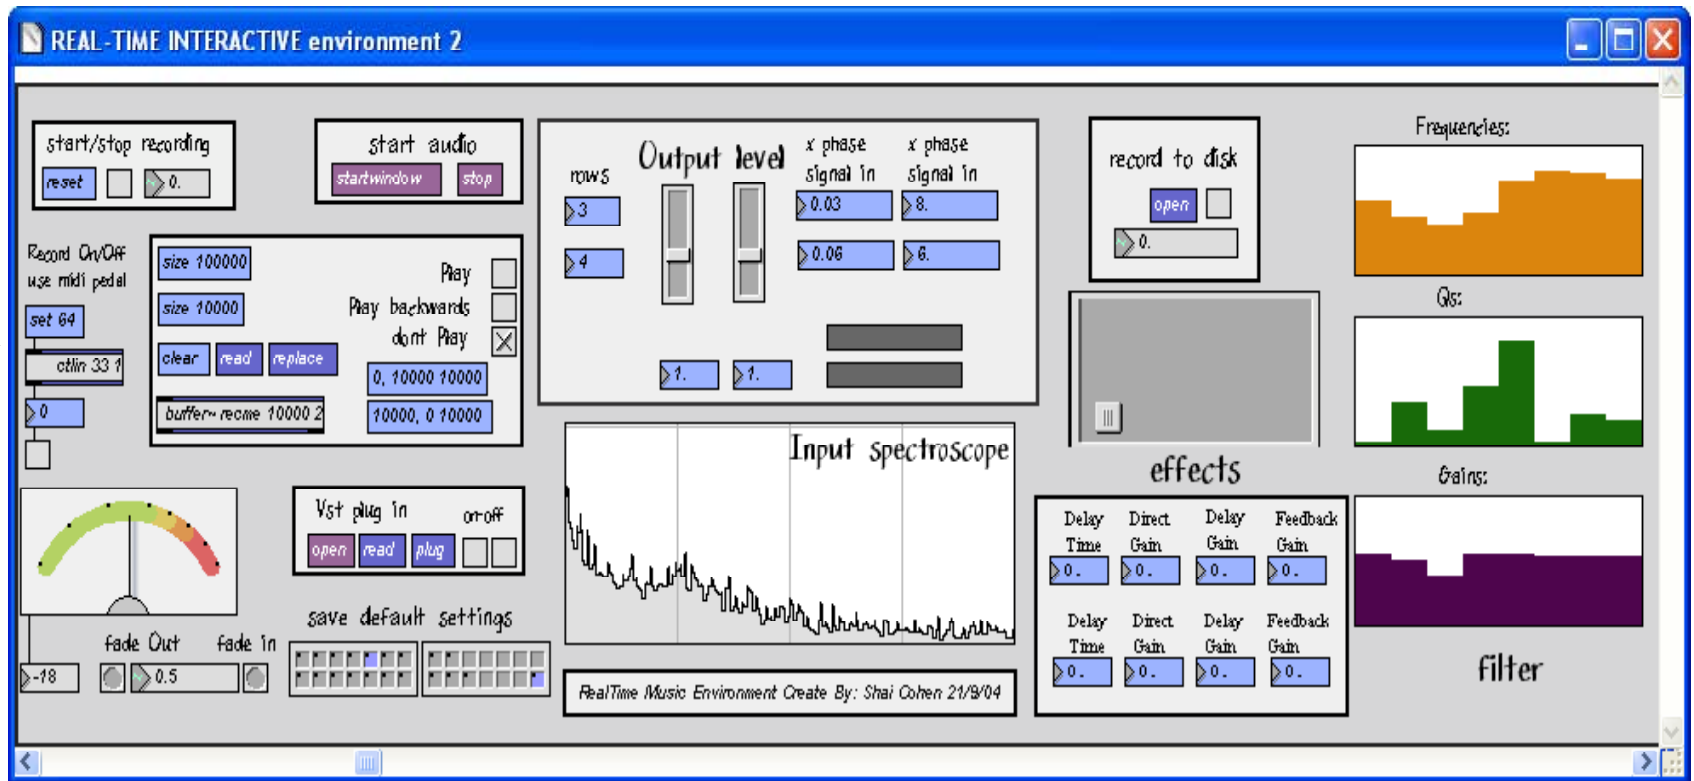

knob can also move both horizontally and vertically, to represent a two-dimensional controller such as a joystick.

Record signals to soundfiles on disk

record~ records a signal into a buffer~ object. Record stops when it has filled up the buffer~

on-off recording using midi. When using a specific control number as an argument, you can send the set message to change the controller number whose value is output

A Signal Level Meter

Audio fade in & out

Store and recall settings of objects

Hosts VST plug-ins

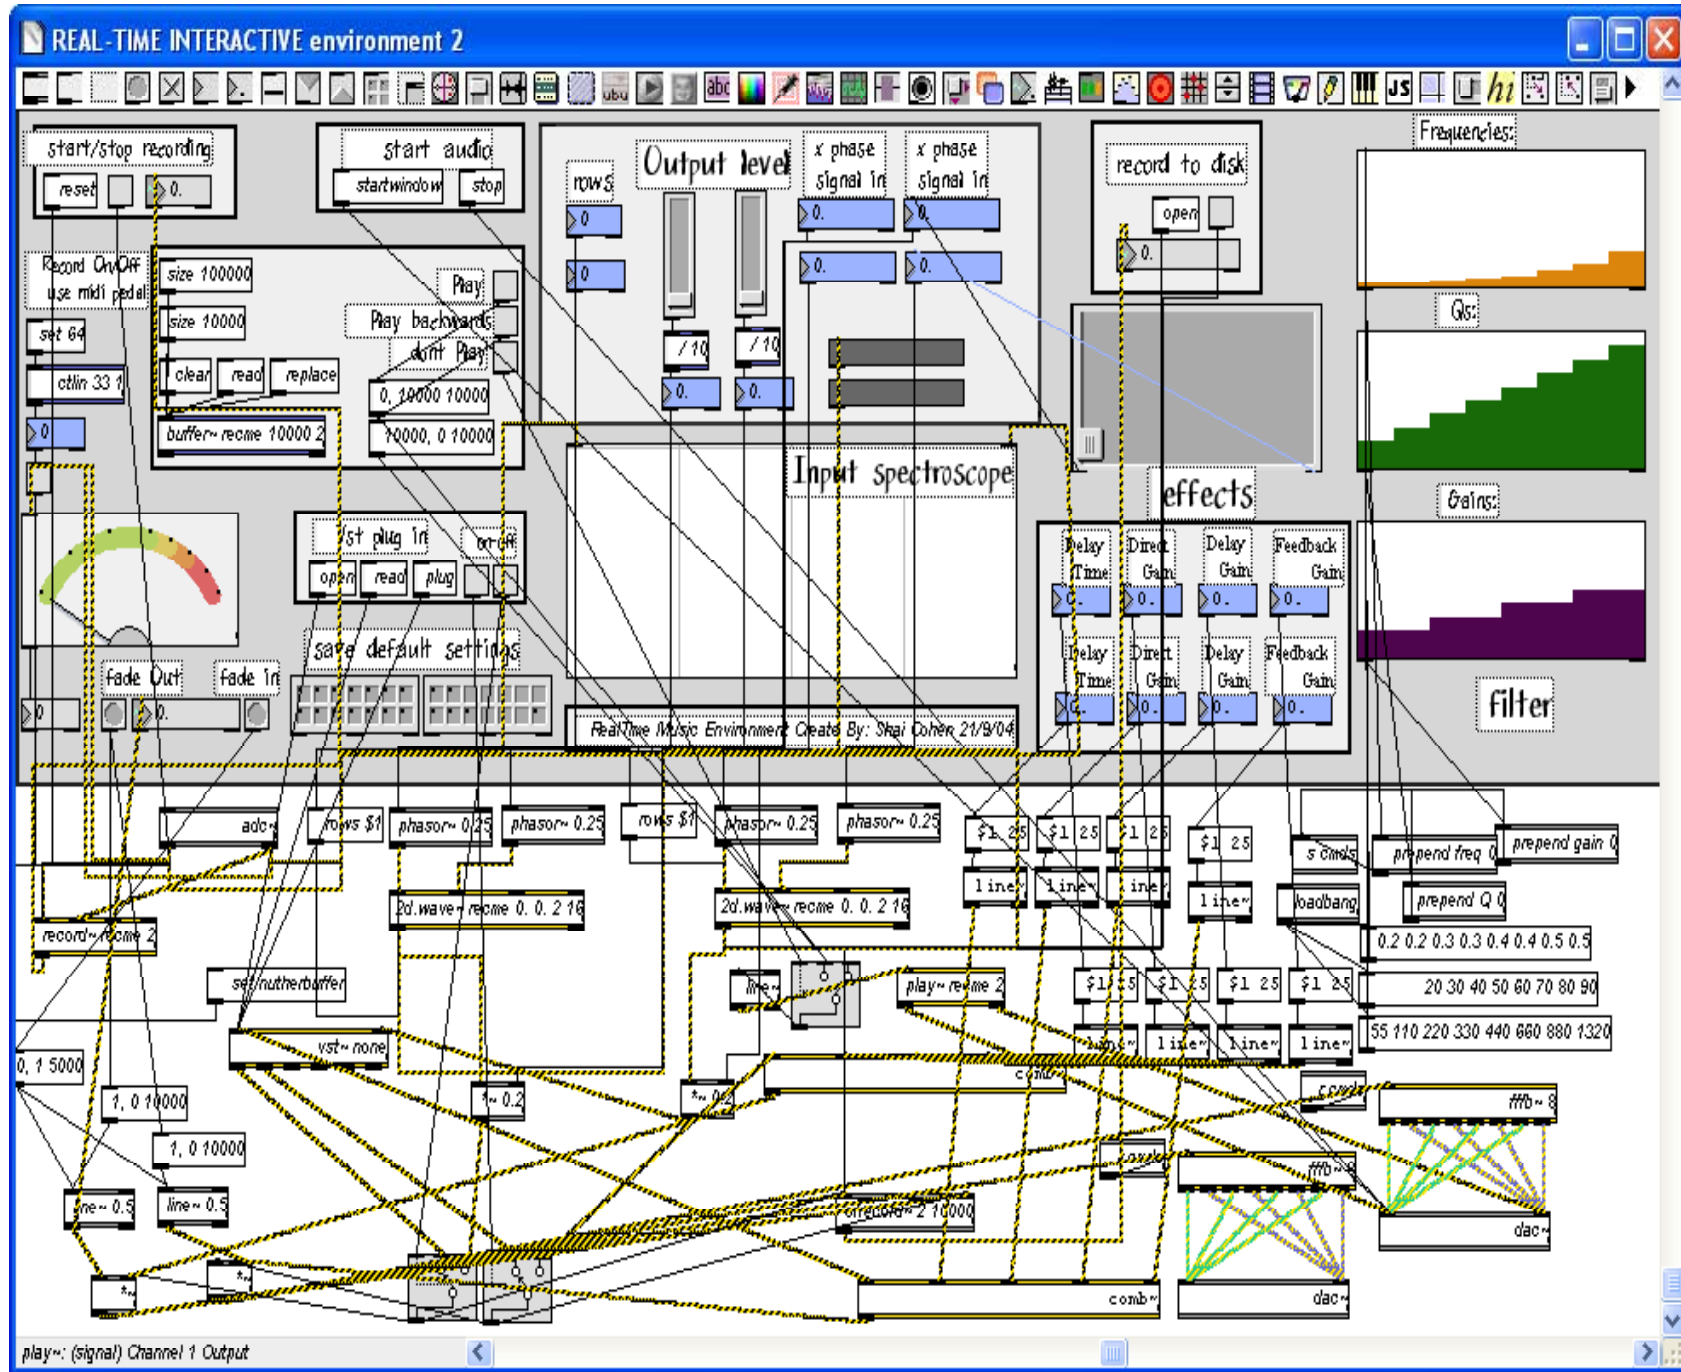

The comb~ object implements a comb filter, in which a slightly delayed version of a signal is added to itself, causing phase cancellations and a spectrum that looks like a comb. The filter implements the following formula:

$$y[n] = a * x[n] + b * x[n - delay] + c * y[n - delay]$$

Fast fixed filter bank with scrolling multislider display

A Butterfly Flaps its Wings...

Composed by : Shai Cohen

"The flapping of a single butterfly's wing today produces a tiny change in the state of the atmosphere. Over a period of time, what the atmosphere actually does diverges from what it would have done. So, in a month's time, a tornado that would have devastated the Indonesian coast doesn't happen. Or maybe one that wasn't going to happen, does." -Ian Stewart

musician should leave the stage empty

The image shows a musical score for five staves: Violin (Vln.), Viola (Vla.), Violoncello (Vc.), Upright Bass (Ud.), and a digital signal processing (Max/MSP) patch (Max). The score is in 4/4 time and features complex rhythmic patterns with triplets and quintuplets. Performance markings include *pizz.* (pizzicato), *arco* (arco), *mf* (mezzo-forte), and *Glissando*. The Vc. part includes a *Glissando* marking with a wavy line. The Max patch includes a 'recording strings' source, a 'buffer~ recome 10000 2' object, a 'preset 2-4' object, and a 'sonoro' object with two output level sliders and phase controls. The patch output is a wavy line that fades out, with the instruction 'fade out ca 30"'. The score ends with the instruction 'al niente'.

My goal is to communicate the organization and beauty that exists in our universe underneath the appearance of random chaos.
- Aleta Pippin
